## PROFESSIONAL SUMMARY

Senior Full Stack Engineer (5+ years) shipping production TypeScript/Node.js systems for regulated lending, logistics, and B2B SaaS. Tech lead at a Mexican SOFOM (regulated consumer lender) credit-origination platform: led incident response to an APT-style server compromise in week 2, then ran a strangler-fig modernization - building new Hono + Drizzle TS services (BullMQ workers, INE OCR, digital signatures) while hardening the production legacy stack (Symfony/PHP, Django/Python, a 100K+ LOC React app) and shipping biometric face-liveness with anti-spoofing - through the AWS production cutover in May 2026. Part-time founder of [Vetify](#), a multi-tenant B2B SaaS (250K+ TS LOC, in production), and part-time English-language contractor for **Ready Set Group LLC (US, 24 months ongoing)** on a 430K+ LOC logistics platform. Daily Claude Code user - drove the modernization with AI-augmented engineering workflows.

## WORK EXPERIENCE

SOFOM - regulated consumer lender, MX

Feb 2026 - Present

### Tech Lead / Senior Full Stack Engineer

Tech lead on a small team (two senior engineers + a PM). Strangler-fig modernization - new TypeScript services built alongside a hardened production legacy stack (PHP/Symfony biometrics + OCR + doc-signing; Python/Django loan apps + SOAP). Own backend, biometric, infrastructure, and security workstreams.

- Week 2: led incident response to an APT-style server compromise** - kernel-level library injection, SSH pivot keys, rogue systemd persistence, backdoor scripts. Ran forensic capture + containment with IT, externalized hardcoded DB/SSH credentials across the Python and PHP codebases, restored a clean posture before the next business day.
- Built a custom OWASP Top 10 WAF middleware** (not a library wrapper) - production systemd log pipeline since Apr 2026, **240K+ WAF events** in month one; plus host-based IDS for Docker/Coolify, an Express honeypot, and a security-hardened S3 gateway that blocked an AWS IMDS/SSRF endpoint.
- Built the new TypeScript stack** - Hono + Drizzle backend (9 modules, **14K LOC, 174 tests**) with a BullMQ async layer (signing, INE OCR, Zell SOAP sync) plus a Next.js/Supabase 6-tab credit-wizard frontend (**11K LOC, 191 tests**), isolating legacy SOAP failures from the user-facing API.
- Hardened & extended the legacy backends** - strangler migration of INE verification to Symfony + Messenger (38K PHP) with a unified OCR engine for edge cases (single-surname, special chars) + LoFirmo signatures; and a Navicat-style structured query builder (nested AND/OR, saved queries, raw-SQL preview) in the Django backend (23K PY).
- Biometric face-liveness with anti-spoofing** (React 19 + Vite + MediaPipe) - ported the anti-spoofing engine lab to production, per-request liveness policy, INE OCR recovery flows (~**700 tests**, CSP hardening, PII sanitization, GPU to CPU fallback for low-end Android); plus the broader production credit-origination React app (107K JS/JXS, ~1,970 tests) and GlitchTip/Sentry observability across services.
- AWS production cutover, May 2026** - coordinated migration off Vultr/Coolify to AWS for the entire stack (legacy + new), with Prometheus/Grafana/Loki monitoring and rclone offsite backups; Coolify retained as QA.

Vetify - multi-tenant B2B SaaS (founder)

Jan 2025 - Present | part-time

### Founder & Lead Developer | [vetify.pro](#)

Multi-tenant SaaS for veterinary clinics: subscriptions, appointments, medical records, inventory. Built and operated as a part-time founder alongside full-time work - 18 months in production.

- Scale:** 250K+ TS lines of code, **7,000+ test cases across 300+ test files** (Jest + Playwright). Next.js 15 + Stripe + PostgreSQL.
- Hardened payments + data:** Stripe webhook idempotency with structured logging and health checks; multi-tenant isolation via **PostgreSQL RLS** (rebaseline + RLS hardening on PG17); RBAC via Kinde Auth; PWA + offline.

Part-time US client engagement, **24 months ongoing**, as the senior engineer working alongside one mid-level developer. Daily working language is English. Two production platforms totaling **690K+ TS LOC**.

- **Ready Set (logistics, 430K+ TS LOC, 470+ test files):** multi-tenant same-day delivery platform; shipped real-time driver GPS tracking + admin live map (pickup pins, mileage, offline state, iOS Safari geolocation, atomic order completion); RBAC via Supabase Auth; Stripe subscriptions + webhooks; React + Recharts ops dashboards.
- **Destino SF (e-commerce, 260K+ TS LOC):** Next.js 15 REST APIs, Square real-time inventory sync, multi-carrier shipping (USPS/UPS/FedEx/DHL) via Shippo; CI quality gates (Lighthouse + bundle budgets).

## SELECTED PROJECTS

Vetify

In Production

Multi-tenant B2B SaaS for veterinary clinics - 250K+ TS LOC, PostgreSQL RLS, Stripe. Next.js 15 | [vetify.pro](#)

FitTrackr

AI

Deployed multi-user fitness platform with Gemini-vision OCR that logs workouts from screenshots. Next.js | Gemini API | [fittrackr.me](#)

alanis.dev

Public portfolio with project case studies and writeups. Next.js | MDX | [alanis.dev](#)

## EDUCATION

Self-directed, continuous - modern TS/Node ecosystem + AI-augmented development workflows

2023 - Present

## SKILLS

**Languages:** TypeScript, JavaScript, Python, PHP

**Backend:** Node.js, Hono, Drizzle ORM, Prisma, Django REST, Symfony + Messenger, BullMQ, REST/SOAP, JWT

**Frontend:** React 19, Next.js 15, Vite, Tailwind, Shadcn/ui, PWA, MediaPipe   **Data:** PostgreSQL (RLS), MySQL, Supabase, Redis

**Cloud / DevOps:** AWS, Docker, Coolify, Vercel, GitHub Actions, GitLab CI, Nginx, Prometheus + Grafana + Loki

**Integrations:** Stripe, Square, Shippo, Twilio (SMS/WhatsApp/OTP), pdf-lib, Puppeteer, INE OCR, digital signature, Kinde, Supabase Auth

**Quality / Security:** Vitest, Jest, Playwright, Sentry, GlitchTip, OWASP Top 10, custom WAF, RBAC, CSP, gitleaks

**AI tooling:** Claude Code (daily driver), OpenAI + NestJS, Vercel AI SDK, Composio MCP, OpenRouter, Gemini API, prompt + agent design

**Languages spoken:** Spanish (native), English (fluent - daily working language)
